

OCS

Online Coordination System

Powerful solution enabling airlines to access slot coordinators' databases for airports around the world

Self-service Slot Coordination

OCS manages much of the routine work of coordination, currently undertaken by sending and receiving SSIM messages. OCS provides real-time airport slot availability displays, and OCS users can view and download the latest schedule information. Authorised users can make online requests to add, change and delete slots and get immediate responses, including automatic offers and the ability to coordinate slots at multiple airports at the same time.

Schedule Changes 24/7

Whether adding, cancelling or changing records, OCS provides an immediate response 24/7. Using the timing flexibility optional information fields, OCS will automatically create and display the nearest two available slots to the timing requested.

- OCS can accept or add records to the waitlist automatically.
- OCS can avoid sending multiple messages to coordinate slots at both ends of the route, where both coordinators are using OCS.
- The interface is intuitive and based on IATA SSIM chapter 6 standards.

Benefits

140+ international airports use OCS

- 01** Real time access to slot data
- 02** Analyse the success of proposed schedule changes
- 03** Slot offers displayed on screen when using timing flexibility
- 04** Look for potential schedule improvements using the latest slot swap list
- 05** OCS is available outside normal business hours
- 06** Create custom reports for market analysis
- 07** Monitor your own performance against the 'use it or lose it' rule
- 08** Add, change and cancel flights
- 09** View / download real time slot data for all airports and all operators (read only)
- 10** View real time slot availability
- 11** Typical week historical availability
- 12** Copy in handling agents to online schedule changes using OCS
- 13** Where both coordinators are participating in OCS, change both ends of a route at the same time
